

IN-FACTORY SYSTEM INTEGRATION

Overview

Our in-factory integration team employs a comprehensive approach to the assembly of each individual system. No two systems are ever the same and this proven methodology has been developed and refined over the years to ensure the proper configuration of each system, no matter the size.

Each component and edge device is coupled in their final configuration and lab tested, to ensure proper performance. The time to discover that a compatibility issue exists is not during the field installation phase of a project. Finally, each component and interconnect cable is labeled and documented for ease of field installation and maintenance.

This detailed integration service allows the system installer or end user the ability to focus on the overall project at hand and not on the compatibility of the various components. When you receive a factory integrated system from Vislink Services, you can be assured that the entire system has been fully tested and documented, prior to shipment, by a member of our dedicated engineering staff.

The end result is that your valuable time is not lost or wasted dealing with component incompatibility or non-working issues in the field. This level of service becomes more invaluable when you consider the magnitude of potential compatibility delays associated with large and complex network deployment.

The Vislink Services in-factory integration team provides you with a strategic partner who is capable of supporting your needs during today's ever changing business environment. Today, more than ever, timely deployment of equipment and manpower, along with the assurance of a well assembled and thoroughly tested system, equates to a better return on your investment.

VISLINK
Services

Features

- A comprehensive integration approach to the assembly of each individual system
- Each component and edge device is coupled in their final configuration and lab tested, to ensure proper performance
- Finally, each component and interconnect cable is labeled and documented for ease of field installation and maintenance

Benefits

- Implements a proven methodology to ensure the proper configuration of each system, no matter the size
- Proper labeling, testing and documentation provide for ease of field installation and maintenance reducing TCO
- Assurance of component compatibility and fully working systems expedites field readiness and increases timely deployment
- Eliminates compatibility delays associated with large and complex network deployment
- Assurance of a well assembled and thoroughly tested system, equates to a better return on investment

Worldwide

Vislink Services customers are located around the world – but they all have one thing in common. There's no room for error. That's why it's vital that you have access to a team that can help Plan, Design, Integrate and Maintain your system. Not only that, but you need repairs and servicing to happen exactly how and when you expect.

Vislink Services caters to a your needs and budgets, and take care of every stage of your system's life – from pre-implementation planning and design services to integration and implementation, to training, maintenance, upgrades and field repairs. We want to be sure our customers have the most reliable solutions - and the most reliable support.

Available Services

- Complete System Planning and Design
- In-Building Wireless Services
- Distributed Antenna Systems
- Bi-Directional Amplifiers
- In-Factory System Integration
- On-Site System Installation
- System Commissioning & Performance Verification
- Training
- Maintenance and Operational Services

Delivered by Proven Performers

- Industry professionals with years of service and integration experience
- From design conception to system commissioning providing an end-to-end solution
- Providing specific custom services, or can manage your complete turnkey project
- Backed by the extensive staff with a forty year history in the industry

Vislink Services specializes in the design and installation of IT communications, video and data microwave communications, electronic news-gathering, airborne law enforcement, cellular and PCS, satellite, video surveillance, fiber optics and site control systems.
